

PAIR UP FOR MAXIMUM SOYBEAN YIELD

PROBLEM

As farmers make input decisions for the upcoming growing season, they are looking for ways to cost effectively increase soybean yields.

SOLUTION

By using **Extract Powered by Accomplish™** with a soybean pre-emerge herbicide application, like Intimidator® or Matador®, farmers can release nutrients tied up in the soil or crop residue to unlock the potential of every acre of soybeans planted this spring.

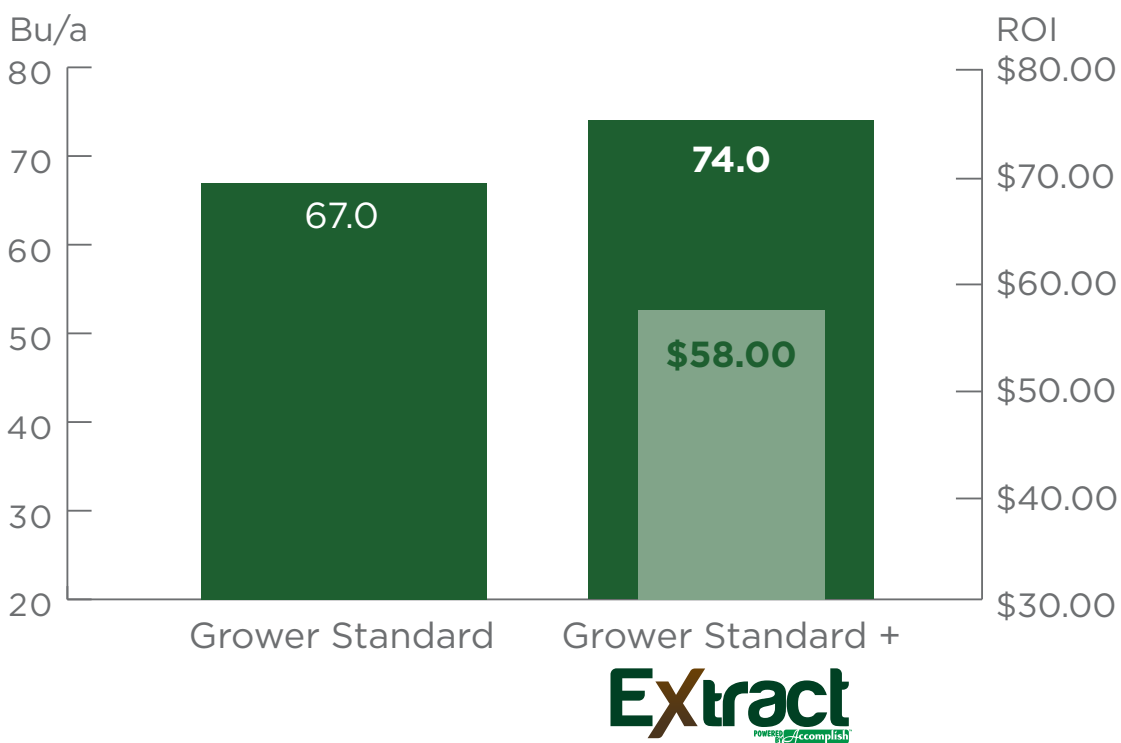

BENEFITS

Intimidator and Matador:

- Provide broad spectrum weed control (burndown and long lasting residual)
- Have a unique formulation - 3 active ingredients to help manage weed resistance

Extract PBA:

- Maximizes nutrient release from crop residues and the soil
- Extends existing nutrient availability later into the season
- Optimizes yield potential

Soybeans – Whiting, IA (2016)
Extract applied on corn stalks at 1 gal/acre pre-plant with herbicide
Note: ROI assumes \$10/bu soybeans

Always read and follow label directions. Check state registration to make sure product is registered in your state. Results may vary depending upon soil, climate and other conditions.
