

TITAN[®]

XC

— **GROW FARTHER** —

As a grower, you want your dry fertilizer to work as efficiently as possible to get the most out of your investment. With **Titan® XC** on your dry fertilizer this fall, more of your applied nutrients will be available to your crop come spring to help drive yield, innovation and sustainability on every acre.

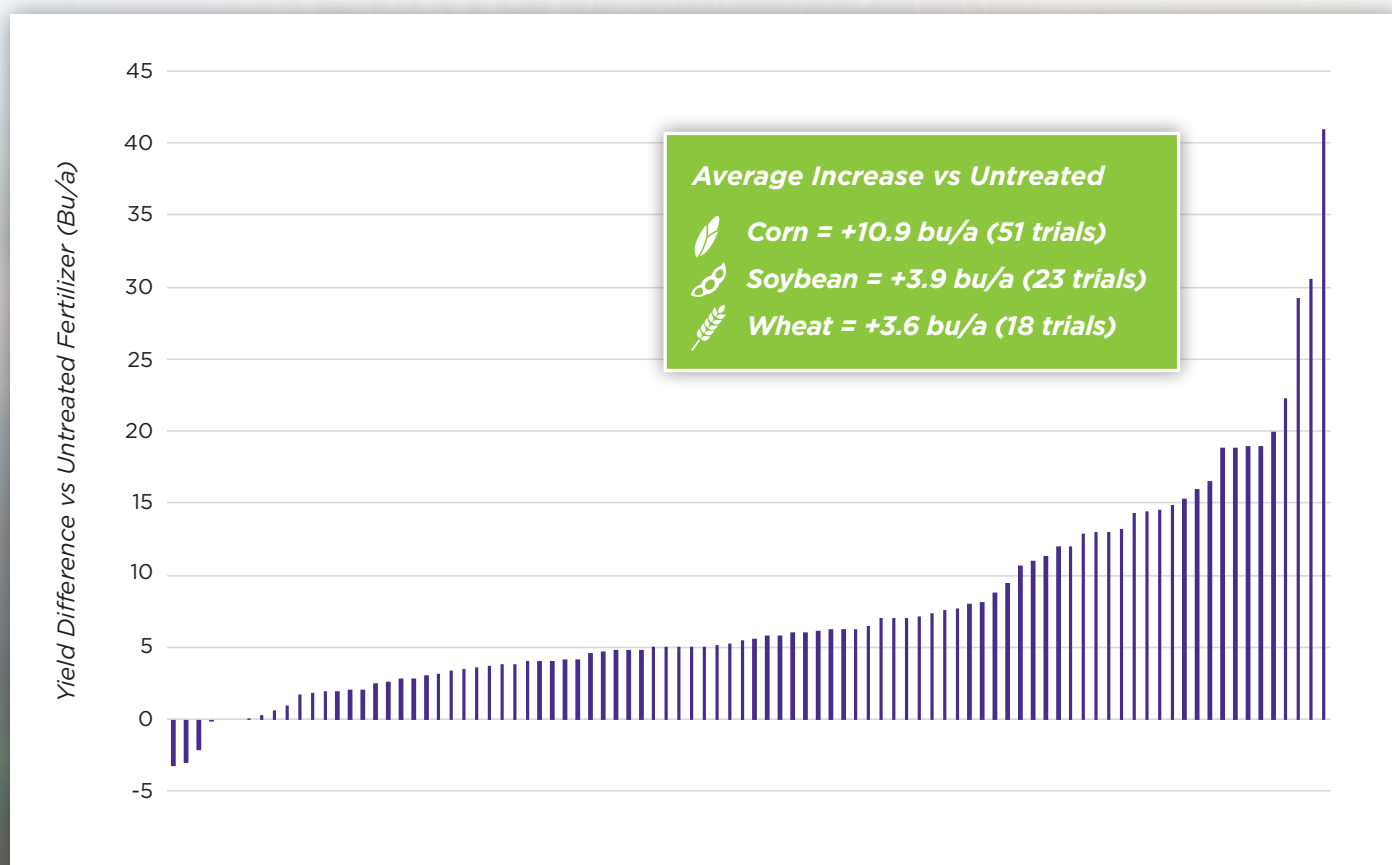

Find Out What More Than 50 Million Acres Already Know

Titan XC on dry fertilizer is a sound agronomic practice that helps you grow farther by providing a long-term benefit to the health and productivity of your farm. Applied on over 50 million acres since introduction, **Titan XC** utilizes unique biochemistry to increase nutrient availability and enhance the efficiency of your dry fertilizer.

Titan XC Drives Yield

Over 10 years of data from split field comparisons, third-party trials and university studies show that **Titan XC** consistently provides a yield increase when applied to dry fertilizer. With **Titan XC** on dry fertilizer, the average ROI for corn and soybeans is more than 6:1 compared to untreated fertilizer.

Yield Summary from 92 Trials (2010–2019)

Titan XC Drives Innovation

The biocatalyst technology in **Titan XC** is unique to the market. **Titan XC** helps drive innovation on every acre by speeding fertilizer prill breakdown and increasing the efficiency of applied nutrients.

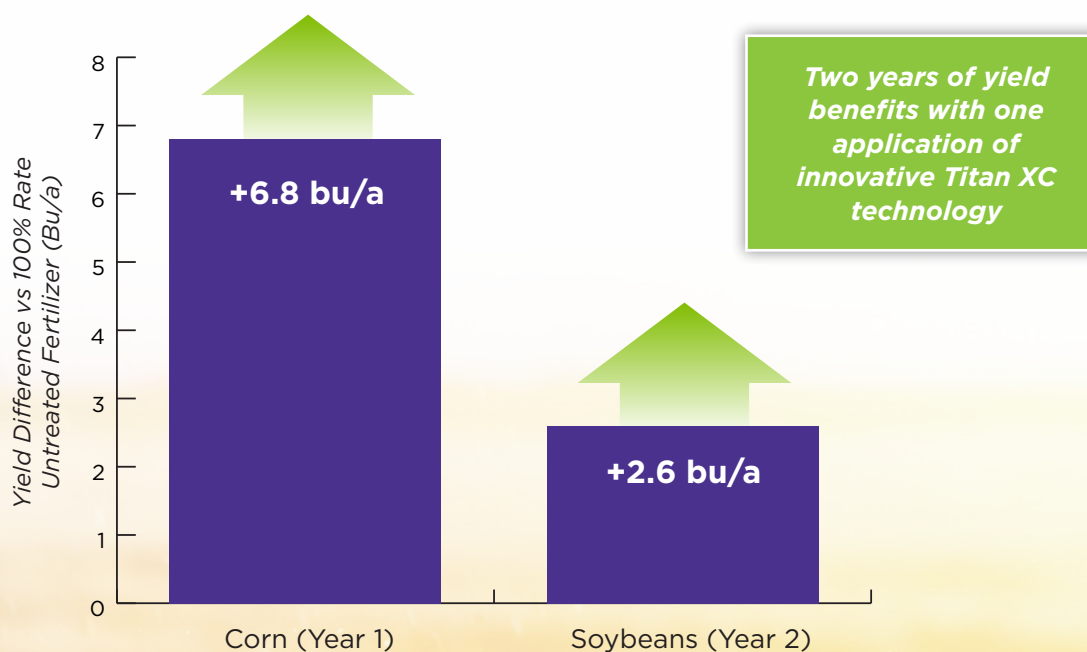

Titan XC Drives Sustainability

Sometimes the answer is not more fertilizer. **Titan XC** increases nutrient availability and mineralization. It also improves root development and nutrient absorption. The result is a more efficient and sustainable fertilizer application.

In the split-field trial below, one application of **Titan XC-treated fertilizer** resulted in increased yields and profit for the grower over two seasons—despite the reduced fertilizer rate used with **Titan XC**.

Corn/Soybean Rotation – Split-Field Trials

Fertilizer application was made in Year 1; Titan XC-treated fertilizer applied at 90% fertilizer rate.

Note: In Year 1 (corn – 5 fields), dry fertilizer tons treated with Titan XC were applied VRT at 90% of the recommended rate to offset Titan XC cost. Untreated tons were applied at a full rate based on VRT recommendations. No additional fertilizer applied in Year 2 (soybean – 3 fields). Trials were conducted in 2018 and 2019 in Sidney, IL.
